BIO 004 HUMAN ANATOMY · SOLANO COMMUNITY COLLEGE

# Module 1 Practice Lab Exam, Answer Key

The answer in bold is what the grader marks right. Everything in the last column is accepted too. Extra words do not cost anything. A misspelled structure does, the same as it would on the practical.

| No. | Question | Answer | Also accepted |
|---|---|---|---|
| 1 | Name this tissue | **Cardiac muscle tissue** | cardiac muscle, heart muscle, myocardium |
| 2 | Name the structure at the tip of the arrow | **Intercalated disc** | intercalated disk |
| 3 | Name this tissue | **Areolar connective tissue** | loose connective tissue, loose areolar connective tissue |
| 4 | Name the structure at the tip of the arrow | **Collagen fiber** | collagen fibre, collagenous fiber, collagen |
| 5 | Name this tissue | **Stratified cuboidal epithelium** | stratified cuboidal epithelial tissue |
| 6 | Name the structure between the two arrowheads. Be specific. | **Lumen of the duct** | duct lumen, lumen |
| 7 | Name this tissue | **Smooth muscle tissue** | smooth muscle, visceral muscle, non striated muscle |
| 8 | Name one location where this tissue is found | **The wall of a hollow organ: stomach, intestines, urinary bladder, uterus, blood vessels, or the airways** | stomach, intestine, urinary bladder, uterus, blood vessel, bronchus, ureter, esophagus |
| 9 | Name this tissue | **Skeletal muscle tissue** | skeletal muscle, striated voluntary muscle |
| 10 | Name one function of this tissue | **Moves the skeleton under voluntary control. It also holds posture and produces heat.** | voluntary movement, moves bones, body movement, posture, heat production |
| 11 | Name this tissue | **Compact bone** | compact bone tissue, osseous tissue, dense bone |
| 12 | Name one function of this tissue | **Supports and protects the body. It also gives muscles levers to pull on, stores calcium and phosphate, and houses bone marrow.** | support, protection, levers for movement, calcium storage, houses marrow |
| 13 | Name this tissue | **Dense regular connective tissue** | dense regular collagenous connective tissue |
| 14 | Name one function of this tissue | **Attaches muscle to bone and bone to bone, and** | attaches muscle to bone, attaches bone to bone, |

| No. | Question | Answer | Also accepted |
|---|---|---|---|
| | | **resists tension along one line of pull.** | resists tension in one direction |
| **15** | Name this tissue | **Pseudostratified ciliated columnar epithelium** | pseudostratified columnar epithelium, respiratory epithelium |
| **16** | Name the function of the structure at the tips of the arrows | **The cilia sweep mucus and the debris caught in it along the surface, away from the lungs.** | move mucus, propel mucus, mucociliary escalator, sweep debris out of the airway |
| **17** | Name this tissue | **Stratified squamous epithelium, non keratinized** | non keratinized stratified squamous epithelium, moist stratified squamous epithelium |
| **18** | Name one location where this tissue is found | **Esophagus, oral cavity, pharynx, vagina, or the anal canal** | esophagus, mouth, oral cavity, pharynx, vagina, anal canal |
| **19** | Name the body cavity outlined in orange | **Mediastinum** | mediastinal cavity, the mediastinum |
| **20** | Name the superior border of this cavity | **The superior thoracic aperture, also called the thoracic inlet, at the level of the first rib and T1** | superior thoracic aperture, thoracic inlet, first rib, level of T1, root of the neck |
| **21** | Name this tissue | **Adipose tissue** | adipose, fat, fat tissue, adipose connective tissue |
| **22** | Name one location where this tissue is found | **The hypodermis, the subcutaneous layer. Also around the kidneys, behind the eyeball, in the breast and in the omentum.** | hypodermis, subcutaneous layer, around the kidneys, behind the eyeball, breast, omentum, bone marrow |
| **23** | Name this entire layer at the bracket | **Dermis** | the dermis, dermal layer |
| **24** | Name the structure at the tip of the arrow | **Apocrine sweat gland** | apocrine gland |
| **25** | Name this tissue | **Transitional epithelium** | urothelium, transitional epithelial tissue |
| **26** | Name one function of this tissue | **Stretches so the organ can fill and empty, and keeps urine from leaking into the wall.** | stretches, allows distension, protects the wall from urine, allows the bladder to fill |
| **27** | Give the LETTER of the abdominal quadrant that contains the spleen | **C** | letter C, quadrant C |
| **28** | Give the NAME of the abdominal quadrant that contains the cecum | **Right lower quadrant (RLQ)** | RLQ, right lower quadrant |
| **29** | Name this tissue | **Reticular connective tissue** | reticular tissue, reticular connective |

| No. | Question | Answer | Also accepted |
|---|---|---|---|
| **30** | Name one location where this tissue is found | **Spleen, lymph nodes, tonsils, or bone marrow** | spleen, lymph node, tonsil, bone marrow, thymus |
| **31** | Name this tissue | **Simple squamous epithelium** | simple squamous epithelial tissue |
| **32** | Name the function this tissue is carrying out here | **Rapid diffusion. The barrier is one cell thin, so oxygen and carbon dioxide cross it quickly.** | gas exchange, diffusion, rapid exchange across a thin barrier |
| **33** | Name the structure outlined in orange | **Dermal papilla** | dermal papillae, papilla of the dermis |
| **34** | Name the structure at the tip of the arrow | **Tactile corpuscle, also called a Meissner corpuscle** | Meissner corpuscle, Meissner's corpuscle, tactile corpuscle |
| **35** | Name the body region at letter B | **Sural region, the calf** | sural, calf, posterior leg |
| **36** | Which body plane would separate A and B into superior and inferior compartments? | **Transverse plane** | horizontal plane, cross sectional plane, axial plane |
| **37** | Name this tissue | **Elastic cartilage** | elastic cartilage tissue |
| **38** | Name one location where this tissue is found | **The external ear, the epiglottis, or the auditory tube** | external ear, auricle, pinna, epiglottis, auditory tube, eustachian tube |
| **39** | Name this tissue | **Elastic connective tissue** | elastic tissue, elastic connective |
| **40** | Name one function of this tissue | **Stretches and springs back, so the structure recoils to its resting shape after every pulse or breath.** | stretch and recoil, allows recoil, allows stretching, springs back |
| **41** | Name this tissue | **Keratinized stratified squamous epithelium** | stratified squamous epithelium, keratinized, epidermis |
| **42** | Name the structure at the arrow and inside the bracket | **Dermal papilla** | dermal papillae, papilla of the dermis |
| **43** | Name the structure at the tip of the arrow | **Eccrine sweat gland** | merocrine sweat gland, eccrine gland, sweat gland |
| **44** | Name this region at the bracket | **Hypodermis** | subcutaneous layer, subcutaneous tissue, superficial fascia, subcutis |
| **45** | Name this tissue | **Simple cuboidal epithelium** | simple cuboidal epithelial tissue |
| **46** | Name one location where this tissue is found. Be specific. | **The duct of a salivary gland. It is also in kidney tubules, thyroid follicles** | salivary gland duct, kidney tubule, renal tubule, thyroid follicle, |

| No. | Question | Answer | Also accepted |
|---|---|---|---|
| | | **and pancreatic ducts.** | pancreatic duct, gland duct |
| **47** | Name this protein | **Keratin** | keratin protein |
| **48** | Name this specific layer | **Stratum granulosum** | granular layer, stratum granulosum of the epidermis |
| **49** | Name the body region at letter B | **Brachial region, the arm** | brachial, brachium, arm |
| **50** | Fill in the blank. Body region A is _____ (directional term) to body region B. | **Proximal** | superior, proximal to B |
| **51** | Name the structure at the tip of the arrow | **Goblet cell** | goblet cells, mucous cell |
| **52** | Name the function of this structure | **Secretes mucus, which traps debris and keeps the surface moist.** | secretes mucus, produces mucus, makes mucin, lubricates and protects the surface |

**Dr. Sharilyn Rennie**
